Line speed measurement test

(1) Optical Line in the land section	(2)Space X Starlink
(3)4G Connection in Japan	**(4)VSAT Communication on the vessel**

(Note that only for (4), the unit is Kbps, which is different from the others; when converted to Mbps, the unit is **0.077 Mbps**.)

Note 1: The above measurements were taken from this URL. “http://fast.com”

Note 2: The maximum information rate (MIR) is the theoretically highest speed, and actual speeds are usually lower. Our company focuses on the actual speed. We recommend that you measure it in real.
